

You must show your work to receive credit. Unless stated otherwise, each problem is worth 5 points.

Use the graph to complete the following problems.

1. [1 pt] Graph the point $(-3, -5)$.
2. [2 pts] Use the graph to determine the x -int(s) of $f(x)$.
3. [2 pts] Use the graph to determine the y -int(s) of $f(x)$.

Solve the equations.

4. $8x - 5 = 11$

6. $5(x - 2) + 18 = 4(x + 3)$

7. $\frac{3x}{2} - x = \frac{x}{10} - \frac{8}{5}$

Bonus

8. $\frac{8}{x-4} + \frac{2}{x+5} = \frac{12}{(x+5)(x-4)}$
