

**You must show your work to receive credit.** Unless stated otherwise, each problem is worth 5 points.

Use the graph to complete the following problems.

1. [1 pt] Graph the point  $(-3, -5)$ .
2. [2 pts] Use the graph to determine the  $x$ -int(s) of  $f(x)$ .
3. [2 pts] Use the graph to determine the  $y$ -int(s) of  $f(x)$ .

Solve the equations.

4.  $8x - 5 = 11$

6.  $5(x - 2) + 18 = 4(x + 3)$

7.  $\frac{3x}{2} - x = \frac{x}{10} - \frac{8}{5}$

Bonus

8.  $\frac{8}{x-4} + \frac{2}{x+5} = \frac{12}{(x+5)(x-4)}$
