

The Thomson Problem

- You should look up and mention some applications in chemistry and biology.

Circle Packings.

- Any spherical triangulation has an associated circle packing (as in the picture).
 - Möbius transformations
 - This circle packing is unique after normalization, i.e., normalizing any two circle packings for a given triangulation will result in the same circle packing.
 - There is an algorithm to compute the radii, and we can find a circle packing using `CirclePack`.
 -
